EDUCATION

Bachelor of Engineering - Electrical Engineering, McGill University — Expected 2028
3.98 GPA, W2025 TEAM Mentor for MATH 133 (Linear Algebra)

SKILLS

Programming	Python, C++, C, nRF Connect SDK, BLE
Design Tools	Altium Designer, STM32, Fusion 360
Languages	Fluent in English and German; intermediate French
Administration	Office 365, Google Suite, Jira

EXPERIENCE

Tesla — *California, USA*
Electrical Engineering Intern — May 2026 - Aug 2026

- Designed a test fixture for a revised power management product, saving $75,000+ by reusing idle HV equipment from a decommissioned factory tester.
- Diagnosed the root causes of hardware and software issues in 86 failing Autopilot computers, working with cross-functional teams to implement quality-improving process changes.
- Saved $30,000+ by recovering false failures and charging defective devices back to suppliers.
- Assisted in the thermal validation of a motor driver test board designed to simulate the load of multiple DC motors in parallel.

McGill Robotics — *Montreal, QC*

Team Captain — Aug 2026 - Present

- Lead a design team of 200 engineering students, providing technical and administrative support to enable long-term success and excellence at international competitions.
- Oversee a budget of $50,000+, ensuring limited funds are spent effectively to provide members with a world-class robotics experience.
- Directly lead a team of 13 executives, delegating tasks and facilitating communication between project groups.

Project Lead — Aug 2025 - Jul 2026

- Planned the integration of 6 major subsystems on the rover while meeting competition deadlines.
- Coordinated with 12 division leads and team captains to allocate a budget of $15,000+ effectively.

Electrical Member — Sep 2024 - Jul 2025

- Designed and fabricated 4 STM32-based motor control PCBs in Altium to enable rover steering.
- Developed C firmware in STM32CubeIDE, integrating CAN bus communication and quadrature encoder feedback processing.
- Developed a 10 A buck converter for the Mars rover's 24 V to 5 V conversion.

CNC Machine Shop Intern — Apr 2023 - Aug 2023
Euro Precision — *Montreal, QC*

- Programmed the initial roughing operation in G-code for a machined part.
- Performed small setups under the guidance of a senior machinist to prepare a cell for a new process.
